PROJECTS

Employee Management System

A team project aimed at developing a comprehensive employee management system

- Developed modules for Attendance, Leave, Holidays, Shifts, Roster, Projects, Timesheets, and Reports
- Integrated Firebase Cloud Messaging for push notifications and Radar.com for real-time geolocation tracking.
- Utilized Riverpod for scalable state management and RESTful API integration.

Todo Application

A solo project focusing on task management functionality for users

- Built a simple task management app using MVC architecture with local JSON for data persistence
- Implemented task creation, update, and deletion features with a clean and responsive user interface

Student Management System

A solo project aimed at creating a student management platform for educational institutions

- Designed a student portal with modules for Attendance, Timetable, Assignments, and Results
- Used Firebase for backend logic and database storage
- Managed app state using Riverpod and built custom calendar components for scheduling.
